

**Photovoltaik-Flächenbörse** – the Photovoltaic Online Exchange – is an initiative of the Energy Institute for Business in Vienna and the Austrian Federal Association Photovoltaic Austria with one primary purpose: anyone who has a large roof area or, for instance, a company car park that would be perfect for generating solar power, can find suitable partners for setting up a solar power plant at [www.pv-boerse.at](http://www.pv-boerse.at).

Companies – and private individuals – often have ideal conditions for photovoltaics, but do not have the time to plan, implement and maintain the system. Or they lack the financial resources for the best possible solution. Here, they have the opportunity to find partner companies for various forms of cooperation, such as:

- ⚙️ Rental income for the photovoltaic site
- ⚙️ Solar energy at favourable conditions
- ⚙️ Shaded parking spaces
- ⚙️ Financial support for roof renovation
- ⚙️ Secure financing through contracting
- ⚙️ Participation in an energy community
- ⚙️ Communal generation plants
- ⚙️ And much more...

The photovoltaic space exchange taps into hidden potential for solar power plants. This not only contributes to the expansion of renewable energy generation and thus to climate protection, but also opens up new business opportunities for tradespeople and service providers.

The site also answers frequently asked questions about photovoltaics – for example, about cooperation opportunities, subsidies and potential power output. Practical examples provide additional inspiration on how to use your own roof, façade or car park space to generate solar power.

**Anyone interested – whether they are looking for or offering photovoltaic space – can register in just a few steps to find a suitable potential partner company:**
